

Gaming Addiction & Student Performance Dashboard

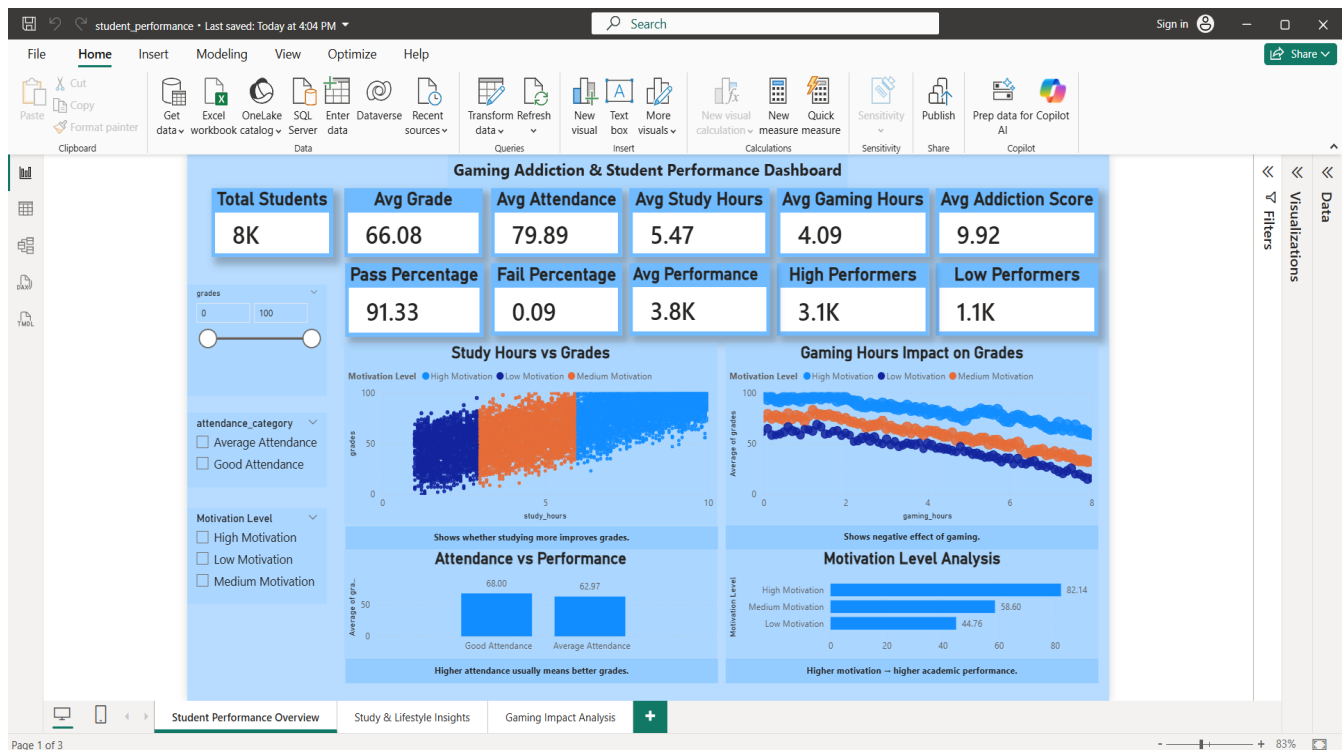

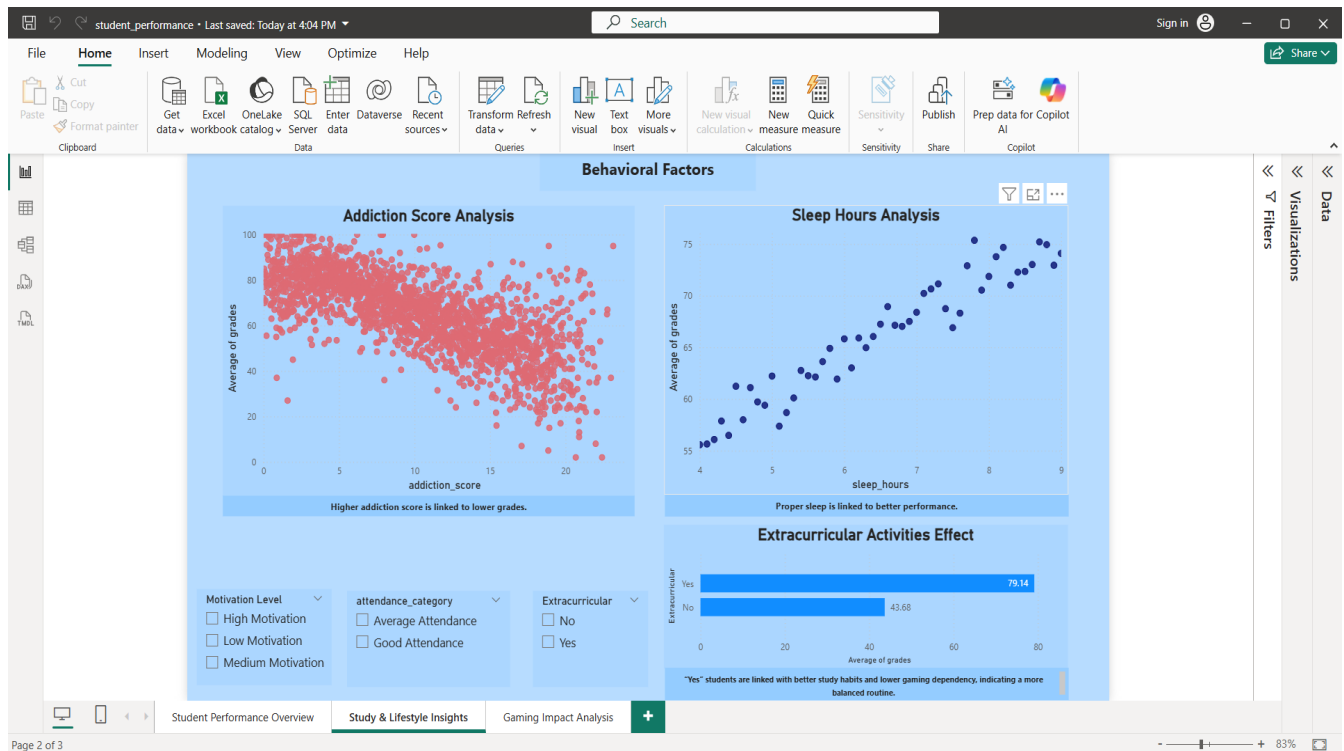

This Power BI dashboard analyzes how gaming behavior, addiction score, study habits, motivation level, attendance, and sleep patterns impact academic performance.

Key Insights

- Higher gaming hours are associated with lower academic grades.
- Students with better sleep hours tend to perform better academically.
- High motivation students achieve significantly higher grades.
- Balanced gaming and study habits improve performance.
- Higher addiction scores negatively impact academic results.
- Students involved in extracurricular activities show better overall performance.
